Acknowledgments

Thanks for using my template. Please transfer ¥10,000 to my account (just kidding :D).

Abstract

This is just a simple template (or maybe better to call an example) of a Master/PhD thesis. The template is made based on the template taken from Department of Precision Engineering, Graduate School of Engineering, The University of Tokyo, but should be adaptable to match requirements by any department/university.

Mainly this is designed for making the title page in Japanese, but the rest of the content is in English. `platex` from W32TeX or TeXLive is needed. Please find the installation guide (mostly in Japanese) to install one of these packages (easier in Linux.) If Japanese is not required, changing all the texts in the title page and you can use normal L^AT_EX to compile.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language. Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. Another reference [3], as well as some random table which shows how nice booktabs can be. See Table 1.1.

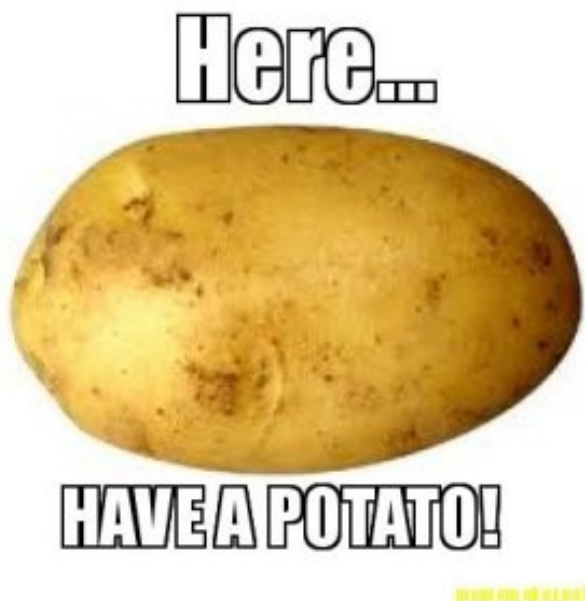

Figure 1.1: Hey Potato!

1.3 Objectives and Challenging Points

A potato is shown in Figure 1.1.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all!
